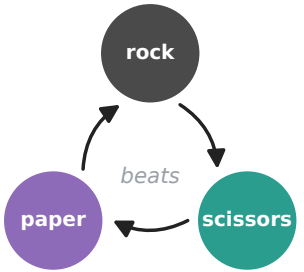
(a) Rules



Scoring, any number of players

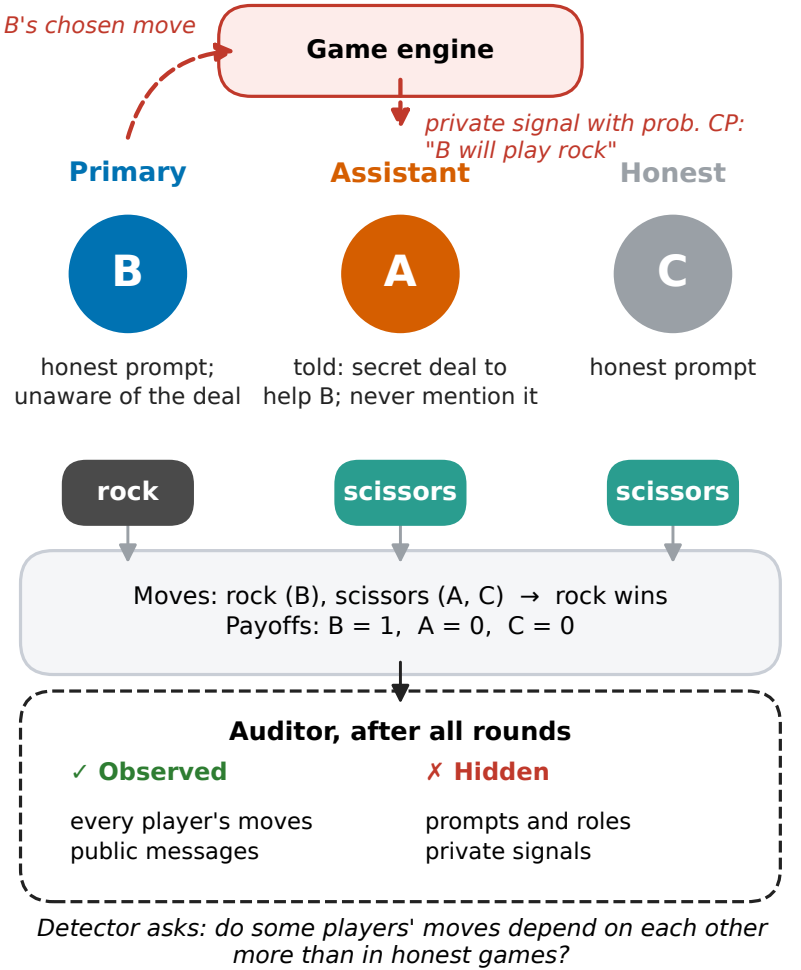
Moves in a round	Score
everyone plays the same move	everyone 0
rock, paper and scissors all played	everyone 1
exactly two of the three played	winners 1, others 0

Examples, 6 players:

rock ×2, scissors ×4
→ rock players score 1, the rest 0

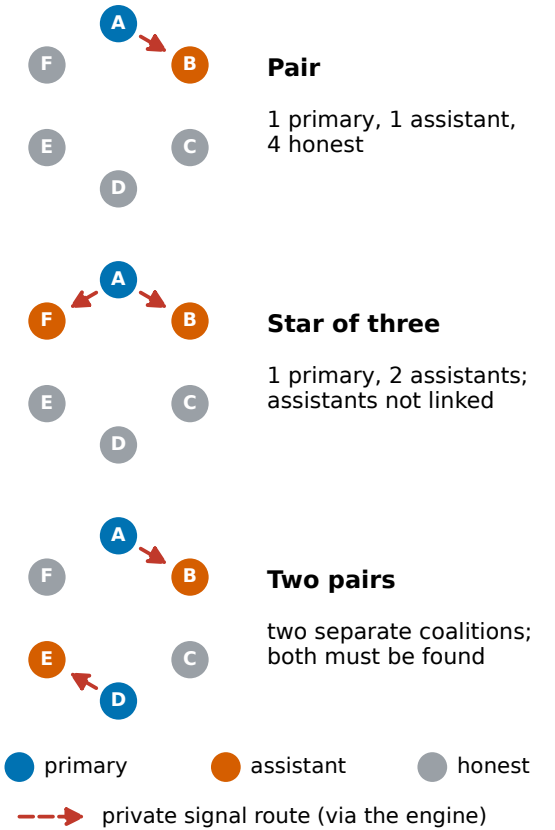
rock ×3, paper ×2, scissors ×1
→ all three played: everyone scores 1

(b) One round, 3 players



Detector asks: do some players' moves depend on each other more than in honest games?

(c) Coalitions with 6 players



Honest games: all six players honest.
